Demonstrating Real-World Security

In the phase 1, they completed a 70-question self-assessment on their Cyber Security practices. With Cyber Essentials Plus, these claims are put to the test, moving beyond paperwork to actual proof.

Discovering Security Holes

We went through each point validating every detail with security checks and scans. We uncovered several security issues that the company hadn't initially spotted.

The Rescan

Once they addressed these issues, we conducted a rescan. This was the moment of truth, checking if all the fixes and updates were effective.

Demonstrating Defence

They had successfully turned their Cyber Security strategy from a plan on paper into a living, breathing protective shield.

A Collaborative Effort

But we didn't just point out problems. Together, we worked on understanding the risks and developing solutions to fix them. It was a collaborative effort to patch up the weak spots in their cyber defence.

Security Success

It worked – they passed the follow-up check. This showed that their security wasn't just good on paper; it was strong and working effectively in their day-to-day operations.

Celebrating More Than a 'Pass'

Cyber Essentials Plus went beyond the bounds of a standard compliance exercise; it was a tangible validation of how well the company's Cyber Security practices stood up in the real world.
